

Amphenol SOCAPEX

OUR YOUNG PEOPLE HAVE TALENT

Hello, my name is Paul PASTOR, I'm 20 and I'm currently living in Annecy, as I'm a student at the IUT in physical measurements. My passions in life are trail running, CrossFit and looking after my dogs.

MY TRAIL :

After obtaining a scientific baccalaureate with options in mathematics and physics-chemistry (with honors), I decided to study for a degree in physical measurements at the IUT in Annecy. Currently in my third and final year, my academic career has been rounded off by a work-study placement at Amphenol SOCAPEX, where I've been working as a test technician in the laboratory for just over a year.

MY JOB:

As a test technician, I am required to test/evaluate/characterize our different products by subjecting them to various tests: mechanical, electrical, accelerated aging. The aim of these tests is to check that they meet the requirements of the various standards and to determine their limit of use.

What I like about my work-study program is being able to handle things, think about how to set up a test and know that my work has a purpose, as these results are often crucial for design offices. What I don't enjoy so much is writing reports, which require a great deal of rigor because they can be long and tedious. Nonetheless, this enables our various clients to see for themselves the quality of the work carried out in the laboratory.

MY ADVICE TO A STUDENT:

What I'm proud of about working for Amphenol Socapex is that in my own way I'm taking part in the defense of France, which adds a dimension that makes me feel useful in what I do.

So don't be afraid to get involved in an industrial field, especially defense. It'll give meaning to what you're going to do with your life!
