Subject: PFAS

A project of restriction of all PFASs (more than 10000 substances) is in process at ECHA. This project concerns the restriction of manufacture, placing on the market and use of PFASs.

The proposed restriction aims to address the risks to human health and the environment posed by the use of per- and polyfluoroalkyl substances (PFAS)

Amphenol Socapex articles contain PFASs:

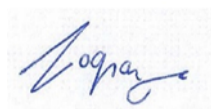

- All 38999 connector series contain fluoro-silicone (FVMQ) in grommets, interfacial seals, seals,
- Some contacts contain PTFE insulators,
-

Amphenol Socapex is in the process of enquiry with their suppliers for the presence of PFASs in materials/articles.

Amphenol Socapex has finalized its participation to the public consultation. The corresponding document is available on the ECHA website. See part 98 - Entry nb 8688 on: [Comments submitted to date on restriction report on PFAS - ECHA \(europa.eu\)](#)

At present, we cannot give an exhaustive status of our products regarding the presence of PFASs, but we will come back to our customers as soon as we get more information.

Best Regards

Laurent LAGRANGE
Technical advisement and Compliance Director
